HD Ultra X 60"

ROWE Scan 850i 60"

FEATURES

	Contex HD Ultra X 6050	Contex HD Ultra X 6090	ROWE Scan 850i 60" 40
Scan width	60 inches (1524 mm)		60 inches (1524 mm)
Max document width	61.8 inches (1570 mm)		63.2 inches (1606 mm)
Max document thickness	15 mm (0.59 inches)		2 mm (0.08 inches)
Energy Star	Yes		Yes
Power consumption	Ready: 39 W, Sleep mode: < 1 W, Scanning: 130 W		Ready: Not quoted, Sleep mode: < 0.4 W, Scanning: < 34 W
True size detection (no shoe-shine)	Yes		No
Unpacked scanner weight	62.5 kg (136 lbs)		31 kg (68.3 lbs)
Size (L x W x H)	71" (1810 mm) x 21" (540 mm) x 11" (279 mm)		71.8" (1824 mm) x 15.7" (398 mm) x 6.5" (164 mm)
Paper load	Face down, all-wheel drive		Face up
Upgradable processing hardware	Yes (external Windows PC)		Yes (external Windows PC)
Full length automatic paper size detection	Yes		Yes
Interface (data)	Gigabit Ethernet xDTR2.5, USB 3.0 with xDTR3		USB3 + RES
Rollable stand	Yes		Yes
Upgradable scan color speed	Yes	No	No
Scanning speed at 200 dpi RGB color	8.9 inches/sec (226 mm/sec)	17.8 inches/sec (452 mm/sec)	3.9 inches/sec (99 mm/sec)
Scanning speed at 200 dpi B&W	17.8 inches/sec (452 mm/sec)	17.8 inches/sec (452 mm/sec)	7.6 inches/sec (192 mm/sec)
Productivity E-size portrait RGB color at 200 dpi	519 pages per hour	875 pages per hour	260 pages per hour
Maximum optical resolution	1200 x 1200 dpi		2400 x 1200 dpi
Accuracy	0.1% +/- 1 pixel at any point of the scanned surface		0.1% +/- 1 pixel measured across the scan width
Data capture	16-bit grayscale, 48-bit color (plus save to file option)		16-bit grayscale, 48-bit color
Sensor type	7 x RGBK CCD		8 x 2D RGB LED CIS
Sensor resolution	299,040 pixels		Not quoted
File formats	Big TIFF, TIF, JPG, PDF, PDF/A, DWF, CALS, BMP, JPEG-2000(JP2), JPEG2000 Extended(JPX), TIF-G3, TIF-G4, multi-page PDF and others		TIFF (UNCOMPRESSED, JPEG, G3, G4, PACKBITS, LZW), MULTIPAGE-TIFF, JPEG, PDF, PDF/A, MULTIPAGE-PDF, MULTIPAGE-PDF/A, BMP, JPEG 2000, CALS, PNG, DWF
Professional PC software option	Nextimage		Scan Manager SE
Tablet app	Nextimage Remote for remote control of software and scanner		No
TWAIN driver	Yes		Yes
Auto image align	Yes		No

What determines a successful large format scanning process?

HARDWARE DESIGN

Much thought goes into a product design and it is very easy to cut corners and make a product that – on the outside – looks similar to another.

And while they may not be obvious at first glance, any cut corners become very apparent once you put the product to use:

- The size of the table where you insert the document proves important to ease the handling of large documents
- Large capacity input buffers will allow you to scan one document after the next at full speed without ever experiencing a delay or lag time
- Utilizing the highest quality camera lenses and scanning technology available in the industry makes it possible to capture every detail in perfect color
- Guide plate options will let you scan any type of thick, thin, rigid or pliable document
- Simple and intuitive operation allows even the newest of operators to feel confident when they walk up to the scanner

These are only a few of the many design features that make the difference between a good and a bad scanning experience.

SOFTWARE OPTIONS

Software is paramount! Good scanning software creates a workflow that makes using the scanner easier, faster and, most importantly, provides you with an image that is equal to and most often better than the original. Choose a scanning software loaded with features that make the scanner shine. The interface should be built so that all of the most important and most used features are easy to get to and easily customizable.

If production is in the forefront of your needs, your software should include powerful options, such as batch scanning, where you simply insert one document after the next into the scanner, and the software will automatically rotate, resize, clean up background noise, enhance the colors and auto name the file – all in one step. No need to touch the PC.

If outputting to a printer is important to you, make sure your scanning software is the best in its class in producing copies – and supports the greatest number of large format printers in the industry. Your software should include drivers that supports the many features of any printer. A good software will include a simple to set up, yet highly complex closed loop calibration that easily matches the colors of your printer with your scanner. With that, any operator can set up the color management in just a few minutes.

PRODUCTIVITY AND FLEXIBILITY

To be productive, the scanner must be flexible and conform to your specialized workflows. Make sure you choose a scanner that is easy to tailor to suit your personal needs as well as the needs of your colleagues. Shifting from one style of workflow to another should be as simple as selecting a personalized software preset.

Productivity is also measured in pure raw speed. It really comes down to how many scans can be produced in an hour. Therefore, your scanner should have enough capacity to completely eliminate any image process waiting time in-between scans. If your scanner also supports batch mode, all of your attention can be focused on preparing the next document to be inserted into the scanner.

IMAGE QUALITY - CCD

A truly professional CCD scanner uses high-end optic lenses that capture extremely accurate detail in high resolution and with deep focal length. This provides flexibility to scan a diverse array of document types:

- If a rigid document cannot lay flat against the glass plate, the deep focal length will capture all details without losing color or focus
- Black and white maps, full color advertisements and posters, artwork and GIS maps – all are scanned with equal precision
- Color, grey or monochrome is perfectly captured in scanners using the best CCD modules and image processing available in the business

IMAGE QUALITY - CIS

A truly professional CIS scanner uses high-end contact image sensors that capture extremely accurate detail in high resolution and 48-bit depth. This provides the ability to scan both monochrome and color documents precisely and inexpensively. There are limitations to CIS technology so it is important to ensure your scanning needs are going to be met using this technology:

- It will be best if your documents are not rigid or heavily folded and can lay flat against the glass plate, this will prevent any focus or color loss, capturing all details of the document.
- Dual LED sensors provide additional lighting from two angles to assist scanning folded or wrinkled documents.
- Color, grey or monochrome is perfectly captured in scanners using CIS modules. However, the lighting source is typically brighter so be sure you have an intelligent software application to manage the additional contrast.

CONCLUSION

Top scanner developers have pushed the boundaries for not only producing great looking scans and copies, but also doing so in a cost effective, simple and highly intuitive and productive manner. Their scanners are developed through real life experience where efficiency, ease of use and quality is of utmost importance. They are built to last and supported by large worldwide distribution networks.

A scanner is not just a scanner. While there are many options available, you should reach for the industry standard of excellence. Ask your scanner supplier for advice.
